

# Concerning ENERGY STAR® Rated Dual Track Sliding Door

As of March 2010, Solar Innovations, Inc.'s dual track sliding glass door (79" x 79") has been ENERGY STAR® qualified. When doors, windows, and skylights are qualified for the ENERGY STAR® seal, they must be tested by an independent testing lab and results must then be provided to the National Fenestration Rating Council (NFRC) who certifies the results.

It is only after NFRC has officially reviewed the results that a window or door manufacturer can submit their qualification paperwork to ENERGY STAR® for consideration. In order for doors and windows to meet energy star requirements, they must fall into the criteria shown below.

Solar Innovations, Inc. has achieved a > ½-lite rating.

Test Results

U Value = .32 (Simulated)

SHGC = .20 (Simulated)

Please visit the [NFRC website](#) to view our certified test results; CPD# SLI-M-2-00009.

Please note, not all ENERGY STAR® qualified products qualify for a tax credit. ENERGY STAR distinguishes energy efficient products which, although they may cost more to purchase than standard models, will pay you back in lower energy bills within a reasonable amount of time, without a tax credit.

As of June 2009, Doors, Windows, and Skylights must meet the following qualifications to qualify for the tax credit.

U Factor ≤ 0.30

SHGC ≤ 0.30

Please note: Installation costs are NOT included in the tax credit. This tax credit requirement change means that most ENERGY STAR doors will not qualify. For more information on this change please visit the [ENERGY STAR® website](#).

Although the dual track slider has been ENERGY STAR® qualified, based on the test values, Solar Innovations, Inc.'s sliding door is not eligible for the ENERGY STAR® tax credit.
