

THE INNOVATOR

by Solar Innovations, Inc.

Solar Innovations, Inc. is a custom manufacturer of greenhouses; conservatories; folding, sliding, and stacking walls, doors, windows, and screens; sunrooms; garden windows; canopies; skylights; and alternative energy products.

5 Years of Progress and Innovation

What started out as one 200,000 sq. ft. building has grown to include a working mezzanine, a second building for logistical staging, and a third building for wood production. Solar's manufacturing floor square footage has grown at an amazing rate over the past five years. More important than "what" we have done, is "why" we have done it. That answer is fairly simple.

Each time you read about new production processes or machines that have been implemented for vertical integration at Solar, more and more of the manufacturing facility's square footage has become dedicated to those processes.

The new campus setting has allowed for the exceptional growth of Solar's capacities and product line, but will still require an expansion of the 43 Roberts Road facility to accommodate the vinyl production line.

Contact a sales representative to schedule tour.

"More important than the 'what' we have done, is the 'why' we have done it."

Pennsylvania | Folding Glass Wall & Pivot Door

Solar Innovations, Inc. recently completed work on this seven foot high pivot door and six panel folding glass wall system. The project featured LoE 366 glazing in the folding glass wall to provide an open view to the home's pool. Obscured glazing was added to the pivot door to provide the homeowner with privacy, while still allowing light to enter. Both units utilized Solar's standard Black duracron frame finish.

Solar can work with you to create custom doors that provide stunning views and functionality to any room.

Visit our website to view more custom door projects.

Canal Park | Folding Glass Walls & Sliding Windows

Solar recently completed four folding glass wall systems and four sliding window systems for Canal Park in Akron, Ohio. Two of the folding glass wall systems feature transoms to allow additional natural light to enter the restaurant. The folding glass walls are opened during favorable weather to provide additional space and to facilitate the ball park feeling. The sliding window units each feature six panels with two panels sliding right, two panels sliding left, and a fixed panel at either end. All the units feature Solar's standard Dark Bronze Anodized frame finish and LoE 366 tempered, insulated glazing.

Solar manufactured 29 windows, 6 vertical wall systems, 2 in-swing terrace doors, 2 out-swing single doors, 3 sliding glass doors, and 1 sliding glass window for this complete glazing package. The project features Solar's standard White Duracron frame finish and LoE 272 insulated glazing. Consistent sight lines provide the home's facade with a cohesive appearance.

NY Residence | Complete Glazing Package

WHATS NEW FOR YOU

After much anticipation, Solar Innovations, Inc.'s vinyl equipment has finally arrived at our facility. After months planning, Solar's vinyl production equipment is awaiting a permanent home in our 43 Roberts Road facility.

When purchasing the equipment Solar was conscious to make both a financially and ecologically savvy decision of purchasing the equipment refurbished.

Solar intends to be actively producing vinyl windows and doors by the end of September 2014.

For preliminary information, please contact a Solar Innovations, Inc. representative.
