Beach House Original:

COMPLETE DOOR & WINDOW PACKAGE FOR OCEANSIDE LIVING

DESIGNED AND BUILT BY EDWARD WORTH INC

THE CHALLENGE

Creating a Home With a View

While constructing a high-end residence in Southampton, New York, an architecture firm sought an experienced glazier to provide quality fenestration to complement the modern style of the residence. The dwelling is nestled between the Atlantic Ocean to the South, and Mecox Bay to the North. The orientation provides wide, scenic views of the beach and bay. However, this luxury

location comes at the cost of increased exposure to hurricanes, high winds, and storms. The corrosive ocean air, seasonal variances in temperature, and exposure to driving rain translate into a necessity for high-quality fenestration. The desired windows, doors, and curtain walls would need to be impact, wind, and water rated with a finish that can hold up to the tough seaside atmosphere.

THE PROCESS

Unmatched Panoramic Views

Solar Innovations® was able to provide the proper fenestration for the client's vision as well as the demands of the location. The high-performance complete window and door package allows for beautiful expansive views to fit the modern aesthetic while holding up to the specific demands of the environment. The curtain walls remain largely unobstructed thanks to the high strength aluminum structure, providing incredible views of the Atlantic Ocean.

The G2 International style windows were chosen for their consistent sightlines and impact-tested ratings which perfectly meet the needs of the design and weather expectations. Awning windows were favored for the location because of their ability to shed rainwater while open. Fixed screens on the interior of the awning windows prevent the intrusion of airborne pests when fresh air is desired.

SINGLE SLOPE SKYLIGHT, G2 ALUMINUM CURTAIN WALL, G2 INSWING TERRACE DOOR

The high-performance glazing, set in thermally broken aluminum bars, provides excellent thermal performance that meets the demands of the climate. An interlayer within the glazing prevents harmful UV rays from

G3 FOLDING GLASS WALL WITH SLIDING SCREEN

entering the dwelling. The AAMA 2605 white finish on the units prevent corrosion that would otherwise occur due to exposure to ocean air. The clean, precisely machined lines of Solar Innovations® fenestration complement the modern style of the residence and provide excellent thermal, water, and impact performance so that the residents can rest easy in their new home.

THE RESULT

With the innovative technology of Solar Innovations® impact products, we were able to provide our clients with a durable and stunning solution to the challenges of creating a one-of-a-kind beach home. Like most Solar products, this project was able to achieve durability while still maintaining a sleek and modern design that fits the home perfectly. These residents can rest assured knowing that the products that Solar Innovations® provided will give them the open views they want while lasting a lifetime.
