

SOLAR INNOVATIONS® CASE STUDY

Project 13-03-055 | Edition 6 7 2021

EXPANDING TO THE OUTDOORS

LUXURY APARTMENT SPACE EXPANDED TO
COMMON AREAS WITH BIFOLD DOORS

THE CHALLENGE

Luxury but Affordable

While looking for an interior/exterior folding glass wall solution for a new apartment complex in downtown Indianapolis, a customer reached out to Solar Innovations®. This particular complex was looking to blend the pleasures of a luxury lifestyle while still offering exciting and affordable living spaces within the city. With Solar's seamless styles and

clean lines, the perfect product solution was put into place.

THE SOLUTION

Views of Suburbia

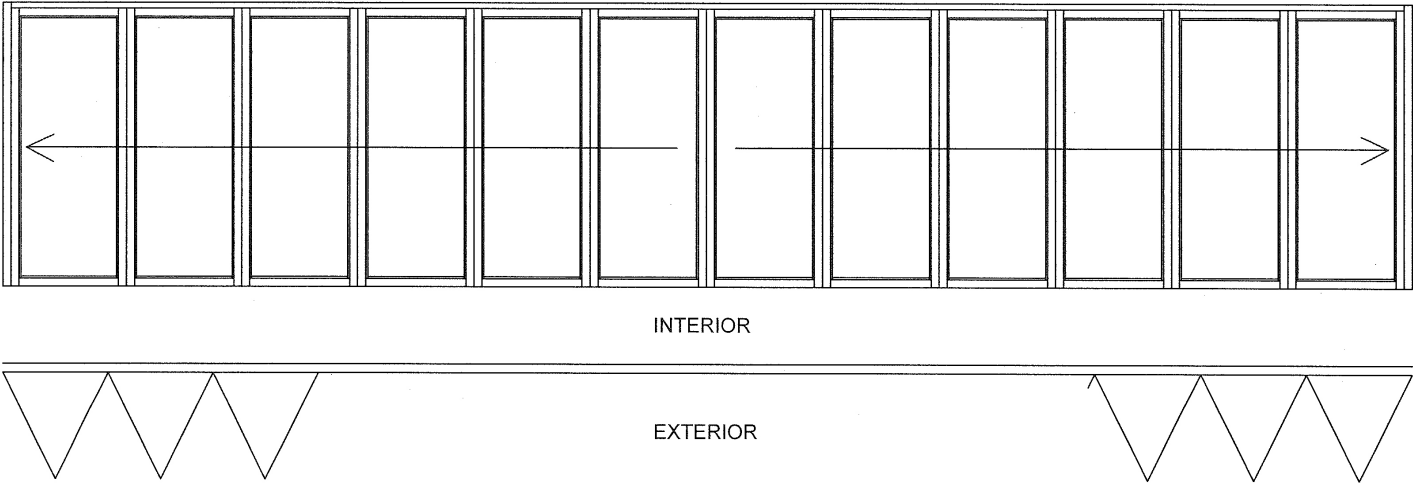

With Solar's superior thermal framing, our folding glass walls were the perfect solution for an interior/exterior applica-

tion. Able to withstand the elements, these doors offer superior performance while still maintaining spectacular views and natural light.

In addition, all of the units featured two sets of panels that

split in the center for a dramatic opening effect in this urban setting. The largest unit featured a total of 12 panels, while the two smaller panels had 4 panels each. The key to this project's solution was that the customer wanted luxury and came to the right place.
