SOLAR IN THE SPOTLIGHT

SOLAR HOSTS SCHUYLKILL CHAMBER OF COMMERCE MIXER

On Wednesday, June 29th Solar Innovations® Architectural Glazing Systems hosted the Fifth Wednesday Mix & Mingle in conjunction with the Schuylkill Chamber of Commerce. Approximately 120 people attended the event, many of whom were first time visitors to Solar's 36+ acre corporate campus.

The Mix & Mingle was held from 5 p.m. until 7 p.m. in the upstairs conference room. The purpose of the event was for Chamber members to mingle and see different businesses within their area. The event was fully catered and high top tables were utilized to transform the space. While guests networked, three separate televisions played separate presentations featuring recent projects, events, Solar Cares fundraisers, and patents updates.

SOLAR HOSTS MIXER

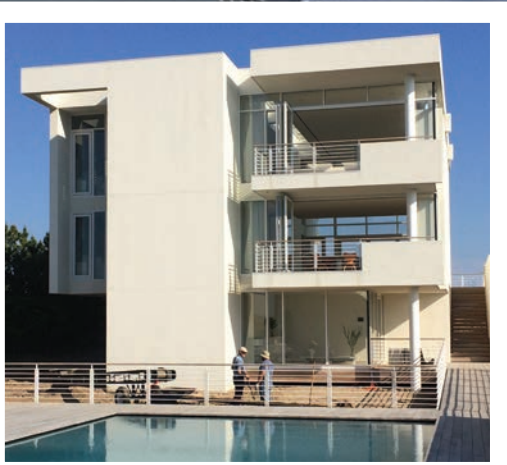

Members of the Chamber were able to participate tours of the facility, led by Greg and our Sales Managers, Chip and Josh. During the tours, attendees were able to see and learn about our IRT reels, Universal® Clamps, doors, windows, and structures.

The networking event allowed Solar team members to connect with Chamber members and sell Solar's products and corporate culture. This event marked the first of its kind hosted at Solar, and we are eager to host more like it as we continue to get more involved with the

PRIVATE RESIDENCE 14-05-096

This project included multiple sliding glass door systems, curtain wall systems, and in-swing terrace doors. This residence located in the Northeast uses our products to create a modern look while capitalizing on the amazing views of the area. We installed units in the main house, as well as the pool house on the property. The project called for impact testing on all of the products included. Solar received Florida impact certification on a butt glaze curtain wall specifically to meet project requirements and now offers as a standard impact product.

NOSE DIVE 15-11-185

Nose Dive features two 12' tall center pivot folding glass window systems utilizing center hung trolleys on each panel. This restaurant in Greenville, South Carolina brings the outside in to create a more spacious dining area while not being restricted to opening the unit on one side or the other. To accomplish this look and feel, the owners originally wanted an out-folding system, but local codes did not allow for a completely out-folding system. This alternative solution led to a great result.

PRIVATE RESIDENCE 15-02-361

This straight-eave double-pitch greenhouse located in the Northeast is suitable for growing plants while maintaining a traditional feel to the property. The project includes an evaporative cooler and a natural gas heater that are controlled by thermostat to manage the indoor environment. Circulation fans, greenhouse benches, and LoE 272 glazing were utilized for plant needs. While ring & collar ties, a Palladian arch, finials, a decorative gutter and ridge cresting add traditional touches.

On April 18th Solar celebrated its 18th birthday. The event took place after 3 p.m. and started off with opening remarks from CEO Greg Header that included the unveiling of the new Solar branding and the announcement of Team Member of the Year, Craig.

After the remarks, the team then gathered in front of the LEED Gold Certified corporate office for a group photo in their provided anniversary shirts. After the photo, team members participated in a cornhole tournament.

Leading up to the event, the team celebrated each day with the "18 Days of Solar" social media campaign. For 18 days, a Solar milestone was posted on various social media platforms to

share Solar history the community and customers. The campaign was also shown on TVs located throughout the office and shop.

We also celebrated our 7th year at our Pine Grove location on June 22nd. The ground breaking for the campus was on January 16th 2008. This move tripled the size of Solar's Myerstown location. Since the move, the Pine Grove workspace has been increased by another 150%. This was achieved by adding two buildings and later doubling the size of one of those buildings.
